Pioneering Artificial Intelligence Solutions
for Tomorrow's Challenges

DATA COFFEE

Product Overview

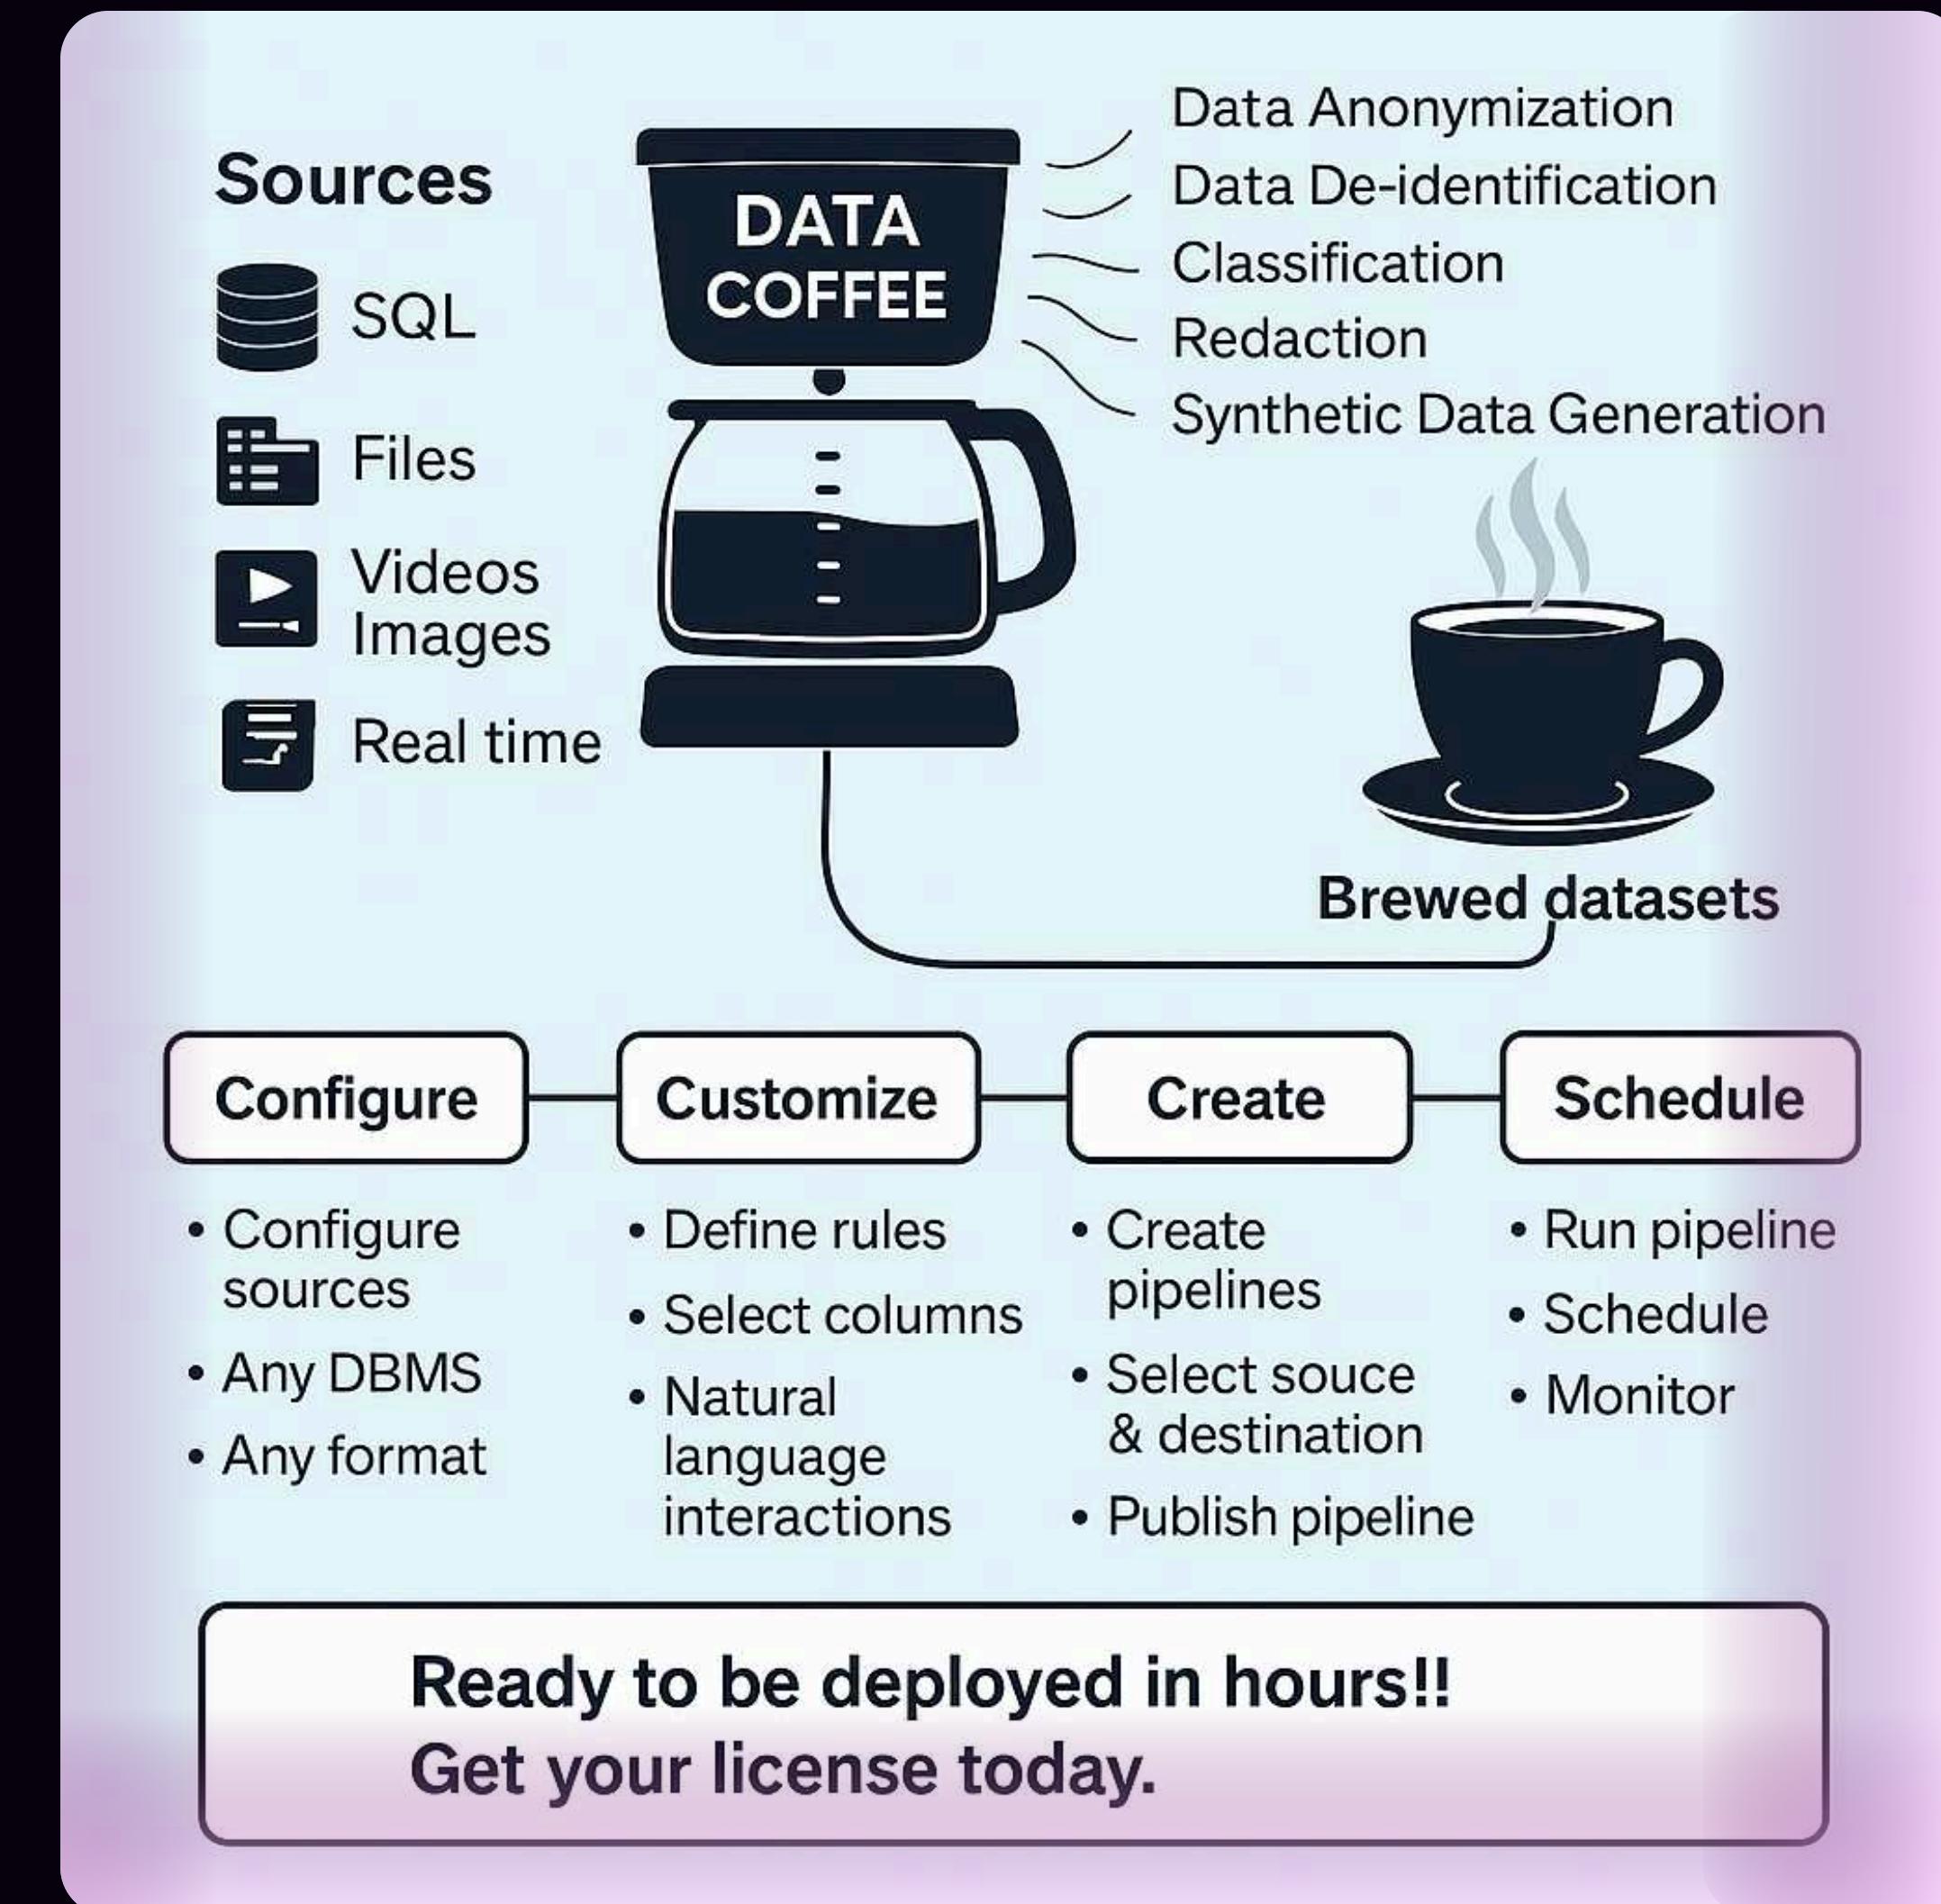

Data Coffee by LeapGen Solutions is a powerful data governance and transformation platform designed for regulated industries and data-intensive enterprises. It simplifies how organizations manage, anonymize, and utilize data—whether for analytics, compliance, collaboration, or AI model training.

With features like tokenization, anonymization, synthetic data generation, and cross-platform data integration, Data Coffee empowers organizations to break down data silos while ensuring privacy, security, and compliance. It's a foundational layer that turns fragmented data ecosystems into streamlined, audit-ready infrastructures.

DATA COFFEE

Core Value Proposition

Data Coffee helps modern organizations:

- **Centralize Fragmented Data:** Consolidates data from multiple formats, sources, and systems into a unified and structured framework.
- **Ensure Regulatory Compliance:** Meets GDPR, HIPAA, FedRAMP, and CCPA standards with built-in tokenization and anonymization.
- **Enable Secure Collaboration:** Shares governed data across teams, departments, or partners without exposing sensitive information.
- **Accelerate AI and App Development:** Generates synthetic data that mimics production data for safe testing, QA, and model training.
- **Improve Data Quality & Analytics:** Transforms unstructured data into clean, structured datasets for better insights.
- **Establish Operational Transparency:** Supports data lineage, access controls, and audit trails for complete governance.

Target Market & Use Cases

1. Healthcare & Life Sciences

- **Pain Points:** Need to manage large volumes of PHI while remaining HIPAA compliant.
- **Data Coffee Solution:** Enables secure data sharing between providers, anonymizes records, and prepares data for AI insights.

2. Financial Services & Insurance

- **Pain Points:** Regulatory pressure and the risk of customer data breaches.
- **Data Coffee Solution:** Provides anonymized data for analytics, internal audits, and third-party compliance reports.

3. Software Teams & AI Labs

- **Pain Points:** Dependence on production data for testing, creating security risks.
- **Data Coffee Solution:** Generates realistic synthetic datasets to safely test applications and train AI models.

Key Features & Differentiators

- **Tokenization & Anonymization Engine:** Centralized token system for PII/PHI that supports real-time masking and enables secure, cross-referenceable data across multiple applications.
- **Synthetic Data Generator:** Creates usable data clones that retain statistical accuracy but contain no real user info.
- **Cross-System Interoperability:** Works across EHRs, CRMs, databases, APIs, and analytics platforms.
- **Structured Data Indexing:** Converts raw, unstructured input into governed, queryable records for downstream systems.
- **Audit-Ready Governance Framework:** Offers full data lineage, access logging, and governance dashboards.

Integration with Other LeapGen Products

How Data Coffee Integrates with Surround AI

1. Privacy Layer for Conversational Data

- Applies tokenization, anonymization, and redaction to every Surround AI interaction, ensuring secure, compliant, and privacy-preserving conversational intelligence.

2. Analytics Pipeline

- Structures Surround AI logs for insights on FAQs, sentiment, and operational KPIs.

3. Synthetic Chat Generation

- Produces safe, realistic datasets for training new bots and testing domain-specific intent flows.

4. Enterprise Data Sharing

- Acts as a secure bridge to send structured data from Surround AI to CRMs, EHRs, and case systems – with real-time PII/PHI detection and masking embedded into the enterprise chatbot layer.

How Data Coffee Integrates with Seismic

1. Ingests Structured Outputs

- Ingests real-time transcripts, summaries, and key phrases from Seismic and applies tokenization and anonymization for privacy and compliance.

2. Synthetic Data for Seismic Model Training

- Creates realistic, privacy-safe conversation data to support NLP and EQ model training and testing without exposing real user data.

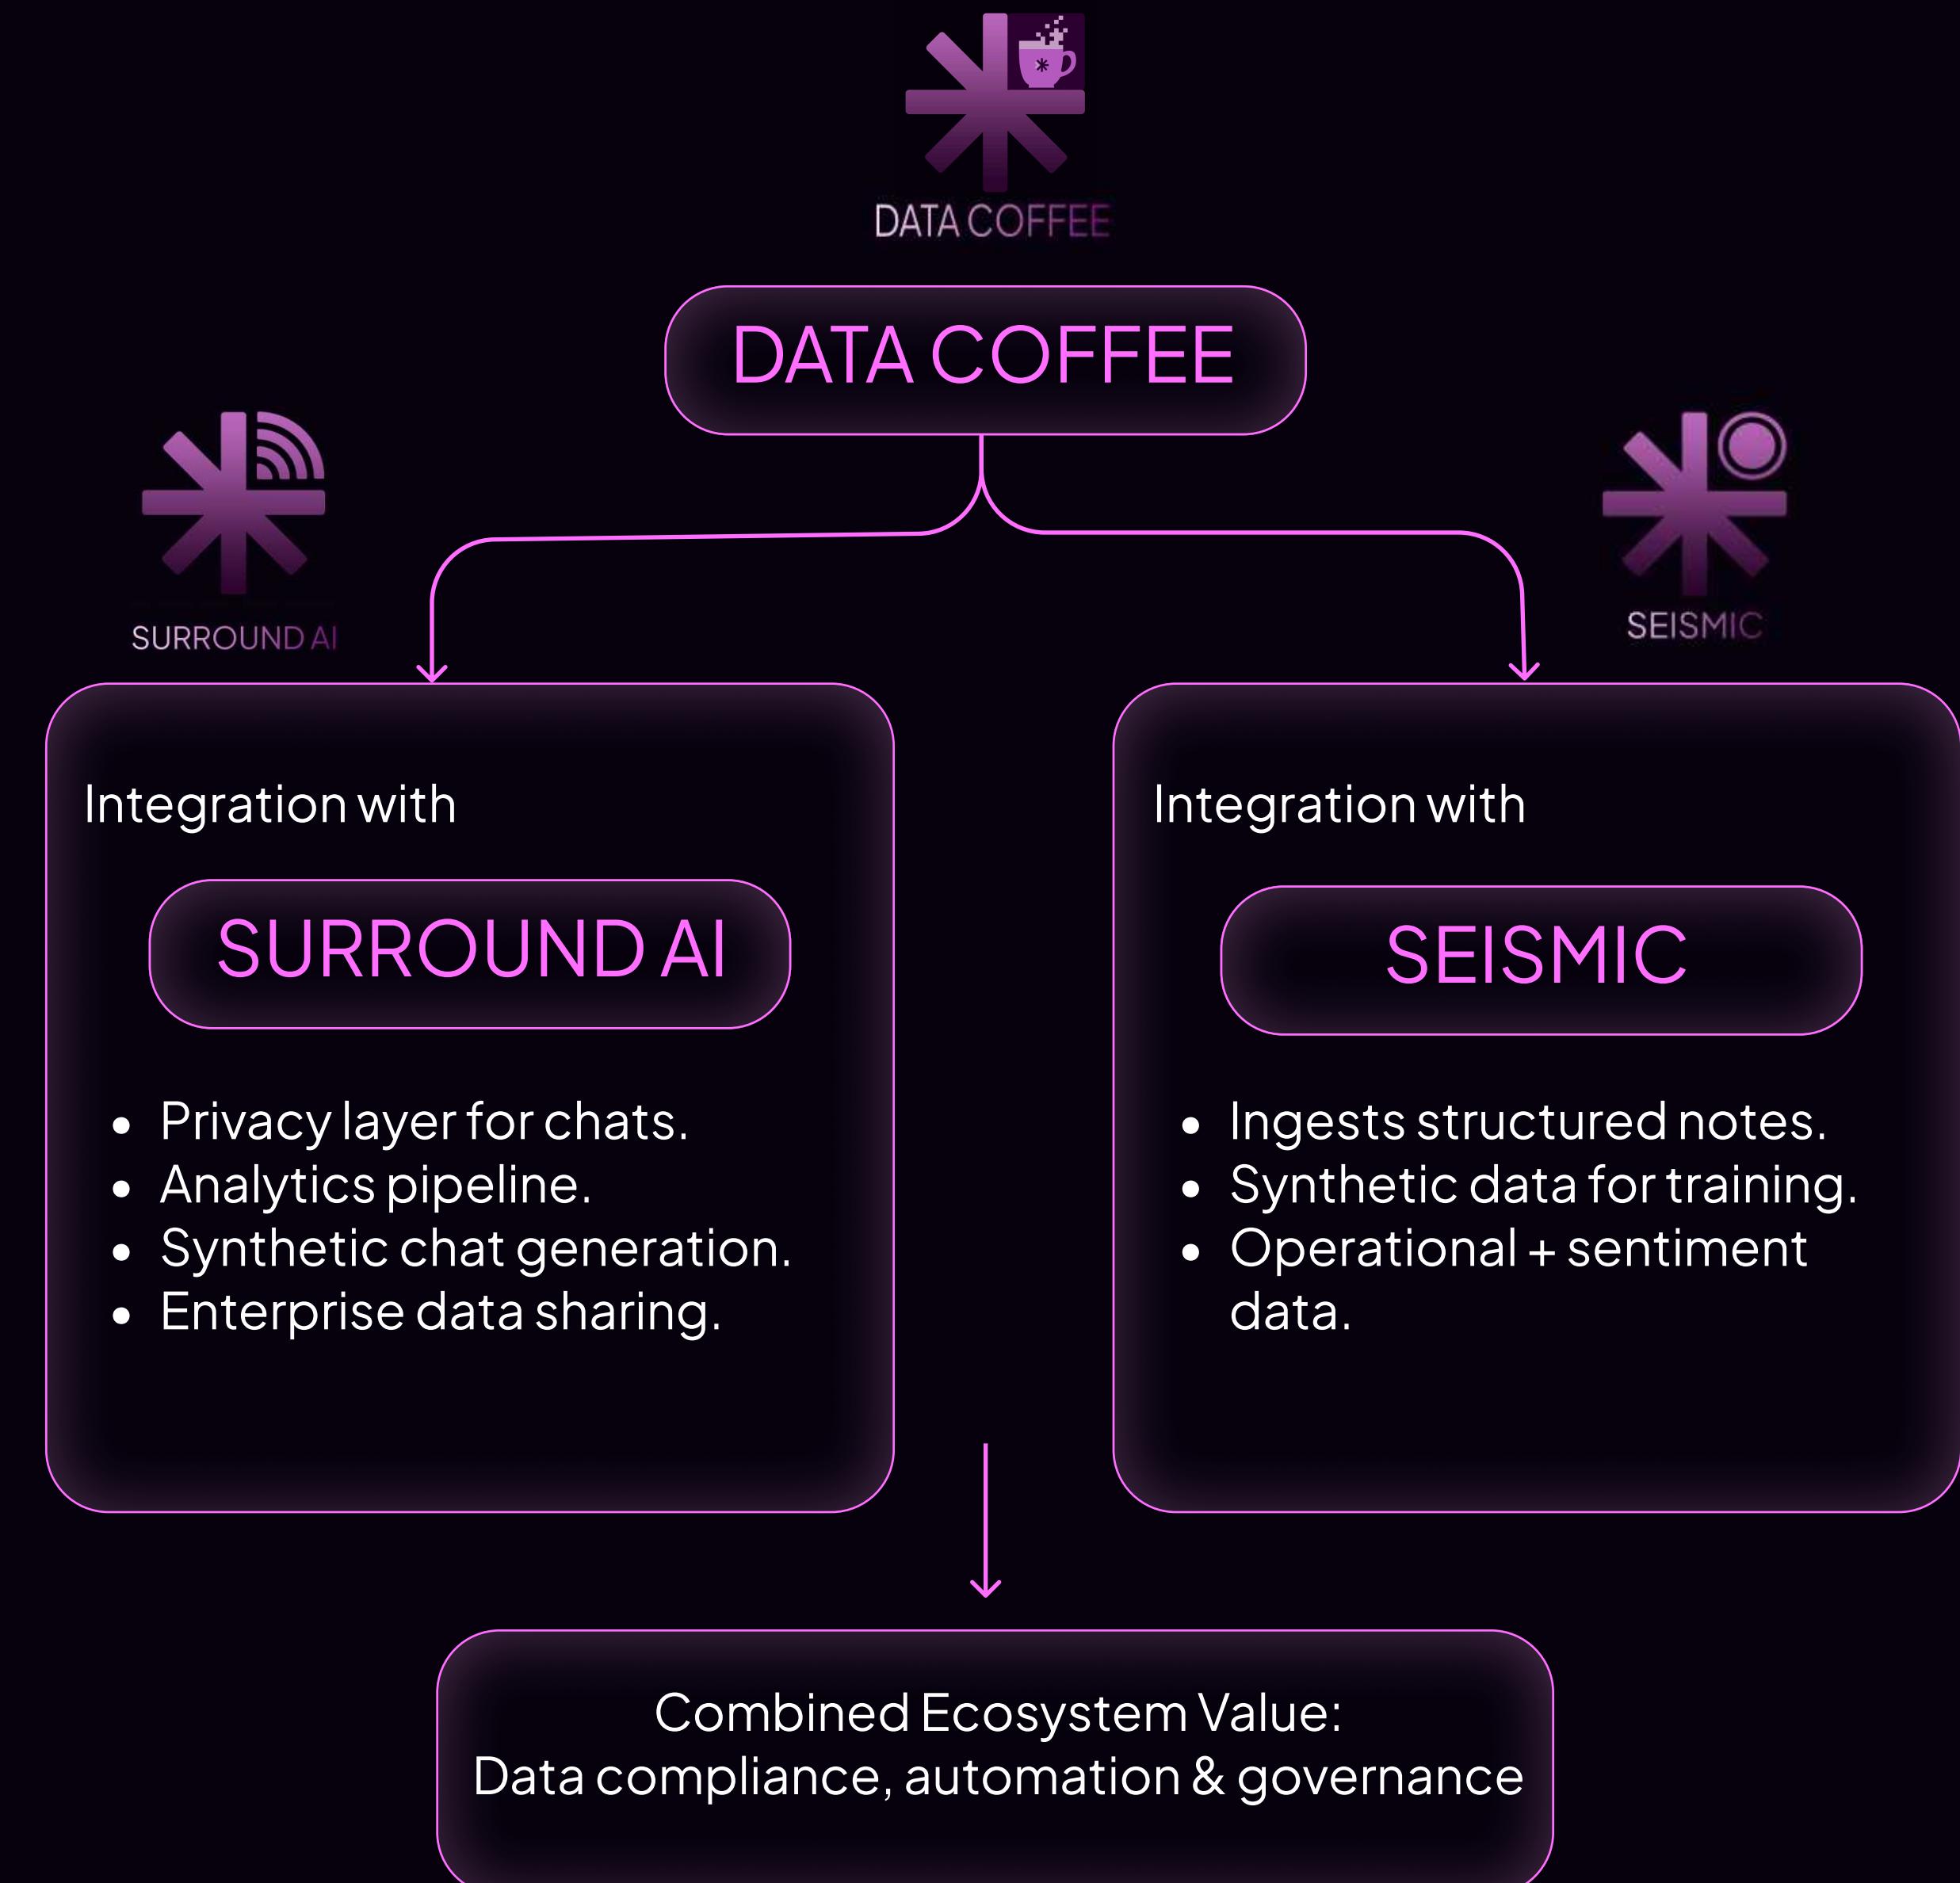

3. Operational & Sentiment Analytics

- Combines structured and emotional insights from Seismic to power dashboards for interaction trends, behavior patterns, and performance metrics.

Combined Ecosystem Value

As the core data infrastructure of the LeapGen ecosystem, **Data Coffee** ensures seamless and compliant data flow across applications like **Seismic** and **Surround AI**. It delivers enterprise-grade data security, real-time processing, and governed integrations to support scalable AI automation and decision-making.

- Enables full data compliance and secure analytics.
- Provides governed integrations across systems.
- Drives workflow automation and data integrity.
- Supports cross-industry use cases in healthcare, finance, and government.
